

<b>Soggetto coordinatore</b>	Fimeccanica Partner SERIT del progetto: Selex Elsag
<b>Titolo del progetto</b>	Inter System Interoperability for Tetra-TetraPol Networks
<b>Acronimo</b>	ISITEP
<b>Descrizione del progetto</b>	<p>A European network where forces share communications, processes and a legal framework would greatly enforce response to disaster recovery and security against crime. Until now, uncertainty on costs, timescale and functionalities has slowed down integration of national Public Protection &amp; Disaster Relief (PPDR) networks. The lack of interoperable communication systems has impeded the cooperation of PPDR forces. ISITEP will develop procedures, technology and legal agreements to achieve a cost effective solution for PPDR interoperability. ISITEP end users will drive requirements to guarantee legal, operational and technical coherence. In addition, a legal agreement template will be proposed for approval between Norway and Sweden within the project timeframe.</p> <p>Through ISITEP, European end users will leverage enhanced terminals in operations abroad within an agreed framework of procedures. This will improve cooperation among European PPDR resources for the benefit of all citizens. European stakeholders will have an economically sustainable solution for sharing national PPDR services.</p>
