

Soggetto coordinatore	Finmeccanica Partner SERIT del progetto: Selex Elsag
Titolo del progetto	A Holistic Approach to Resilience and Systematic Actions to Make Large Scale Urban Built Infrastructure Secure
Acronimo	HARMONISE
Descrizione del progetto	HARMONISE will be grounded in a holistic view of innovation, and will advocate synergies with, and augmentation of, existing FP7 projects such as VITRUV, RIBS and DESURBS among others, to which the HARMONISE consortium has direct linkages. The project recognises the necessity to improve the design of urban areas and increase their security against, and resilience, to new threats. Specifically, HARMONISE seeks to deliver (a) a holistic HARMONISE Interactive Semantic Intelligence Platform; (b) a suite of innovative tools (toolkit hosted within the HARMONISE platform); (c) greater understanding and awareness of urban security and resilience vis-a-vis dissemination activities; and, (d) commercialisation opportunities among emerging new markets in this field. HARMONISE will result in significant resilience enhancement methods for large scale urban built infrastructure.
