

<b>Soggetto coordinatore</b>	Dipartimento di Informatica Università degli studi di Verona
<b>Titolo del progetto</b>	Suspicious and Abnormal behaviour Monitoring Using a netwoRk of cAmeras& sensors for sItuation awareness enhancement
<b>Acronimo</b>	SAMURAI
<b>Descrizione del progetto</b>	<p>The aim of SAMURAI is to develop and integrate an innovative intelligent surveillance system for robust monitoring of both inside and surrounding areas of a critical public infrastructure site.</p> <p>SAMURAI has three significant novelties that make it distinctive from other recent and ongoing relevant activities both in the EU and elsewhere:</p> <ul style="list-style-type: none"> <li>• SAMURAI is to employ networked heterogeneous sensors rather than CCTV cameras alone so that multiple complementary sources of information can be fused to create a visualisation of a more complete “big picture” of a crowded public space.</li> <li>• Existing systems focus on analysing recorded video using pre-defined hard rules, suffering from unacceptable false alarms. SAMURAI is to develop a real-time adaptive behaviour profiling and abnormality detection system for alarm event alert and prediction with much reduced false alarm.</li> <li>• the SAMURAI system will also take command input from control room operators and mobile sensory input for patrolling security staff for a hybrid context-aware based abnormal behavior recognition.</li> </ul>
<b>TA/SG</b>	TA 3
<b>Riferimento Bando</b>	FP7-SEC-2007-1
<b>Valore del progetto</b>	€ 3.720.000
